Special Effects

Special Effects can only be used with the Strike, Thrust, Throw, Shoot, Dodge, and Parry proficiencies.

To attempt an offensive special effect, an untrained characters suffers a -2 proficiency penalty and deals no damage. A trained* character chooses one or the other. To attempt a defensive special effect, an untrained character suffers a -2 penalty and takes 2 psyche damage. A trained character chooses one or the other. Apply one of the following detrimental effects to the target.

- **Knock Down -** Target is knocked prone
- **Throw/Knockback -** Target is moved 2 paces in any direction. If using Throw or Shoot, direction must be away from user
- **Disarm -** Target is disarmed of user's choice of held item.
- **Grab -** May not be used with Throw or Shoot. Applies Grabbed Status
- **Stunning Blow -** Target is stunned.
- **Crafty Defense -** Only Dodge or Parry. Attacker takes damage equal to user's AGL bonus.

* Training refers to the user of a proficiency in which the corresponding skill is level 1 or higher.
* If there is good reason, a GO may lift/add restrictions

Dual Wielding - For Shoot, Thrust, Throw, and Strike attacks, a character can choose to make two simultaneous attacks if equipped to do so (i.e. two swords/firearms/etc), or unarmed. Against separate targets, each attack is resolved independently and the attacker's proficiency for both attacks is 6 less then normal. Other penalties may reduce it further. When both attacks are against the same target, resolve them as a single attack with the proficiency 3 lower then normal (and other penalties may reduce it further). If successful, the attack deals +1 damage.

The attacker may not activate special effects or powers during turns that include simultaneous attacks.

Character Powers
Level - Power Name

Power List

Power Name	Level

Status Effects Cont.

compare it to the original attack result or suffer the effects of the attack instead.

Knocked out - A character that is knocked out is unconscious but is not automatically reduced to 0 psyche. The character is unable to take actions or movement and is unaware of her surroundings. Unconscious characters are vulnerable to Deathblows. During this time, the character may not activate or use interrupt-based powers or effects.

Lame - A Lame character may not run or sprint.

Mute - Mute characters may not speak, sing, whisper, grunt, whistle or make any coherent noise that requires air passing from the lungs. Mute characters are also prohibited from using powers that require vocalization.

Poisoned - Poisoned characters suffer the effects of the original poison at the end of every Round. Afterwards they must make the original feat again, with the difficulty reduced by 1 for each previous attempt.

Prone - Prone characters are limited to 1 pace of crawling movement and performing an action. Prone characters may stand by forfeiting either their movement or their action. If they forfeit their movement, any action suffers their running movement penalty . Prone characters suffer a -1 to all physical defensive proficiencies except Evade, which is granted a +1 proficiency bonus. Prone characters suffer a -3 to all physical offensive proficiencies except Shoot, which is granted a +1 proficiency bonus.

Sluggish - A character that is sluggish will lose her initiative stones during any round of combat, suffer a - 2 to all proficiency tests, -2 stones to all feats, and are limited to walking movement. A sluggish character may not activate or use interrupt based powers or effects. Whenever a sluggish character loses any Blood while out of Blood, they instead receive the same loss to their Health.

Stun - If a character is Stunned, they suffer a -4 offensive and -2 defensive proficiency penalty for the duration. During this time, the character may not activate or use interrupt based powers, or effects, and cannot sprint.

Surprised - While Surprised, anyone attacking the surprised character gains +3 to their offensive proficiency. If a character is surprised as the trigger for a conflict, that character does not receive a random bonus for initiative on the first round.

Healing: Heals one point of Health, Blood and Psyche
Rejuvenation: Heals one point of Health, Blood, Psyche and Vitality
All types of healing are subject to several limitations in addition to the max scores for each secondary stats.
1) A character cannot heal to greater then their max score
2) A character cannot recover an amount of health or Blood greater then their current Vitality. Aeternari are immune to this restriction
3) Vampyres do not gain Blood from points of healing or rejuvenation and Aeternari do not gain Vitality from points of rejuvenation. Immunity to one aspect of the restrictions does not imply immunity to the others

cont.→

Status Effects

Status Effects are either willing or unwilling changes to your character's condition that confer a restriction, a bonus, and/or a penalty based on the status effect applied. (removed the Cannot Sprint clause, will apply to specific effects)

Bleed - Bleeding characters lose 1 Blood whenever they perform an action. They can take an action to bandage their wound, not losing the Blood for that action and removing the condition.

Blind - Blinded Characters suffer a -3 to melee attacks and defenses, and a -6 to ranged attacks requiring a target and defenses, unless they have something that negates this penalty. Physical contact with the target eliminates this penalty. Sprinting while Blinded requires an Agi feat dif 4 or fall prone at the start of your movement. At the start of a round a character may declare they are averting their eyes and voluntarily apply the blinded condition to themselves for the duration of the round.

Darkness - Darkness applies the Blind status to anyone inside the effect who is unable to see through it. Already Blinded characters are unaffected by Darkness. Attacking someone inside of Darkness you cannot see through applies the same penalties as Blind.

Daze - If a character is Dazed, she has a -2 offensive and -1 defensive proficiency penalty for the duration, and may not activate or use interrupt based powers or effects, and cannot sprint. A character may use one of her Dazed actions to clear her head if she wishes, only able to take walking movement during that time. Doing so will eliminate the penalty of being Dazed.

Diseased - Diseased is a condition that occurs once a day at check in. Upon such a time, the character with this condition must make a Con feat with a difficulty 1 lower for every day since contracting the disease, or suffer the effects of the disease.

Fear - A character that is inflicted with Fear cannot willingly move closer to the source of this effect. Additionally, while within sight of the source, you suffer a -2 to all proficiencies and -2 stones to all feats.

Panicked - Panicked characters suffer the effects of Fear. Additionally, they must make a WIL save determined by the source, or be forced to move their full sprinting movement as far away from the target as possible.

Grappled - A Grappled character is unable to move willingly, and their movement is considered to be 0. If they wish to target anyone other than their Grappler, they suffer a -2 penalty to that action. Excluding metaphysical attacks that do not physically manifest, if an attack against the grappled character critically misses, the grappler must pull a corresponding defense proficiency and compare it to the original attack result or suffer the effects of the attack instead.

Grappling - Characters that are Grappling are considered to have one (or more) of their hands occupied, and such may not use two handed weapons or conduct activities that require both hands. They may not move more than, and if they move out of Touch range of their target, they may make an opposed Str check to drag their Grappled target along, else this condition ends when you are no longer able to touch the target. Excluding metaphysical attacks that do not physically manifest, if an attack against the grappling character critically misses, the grappled character must pull a corresponding defense proficiency and
